Question 1:

The size is the number of elements stored in the array. The capacity is the maximum number of elements an array can hold without needing to allocate any more memory.

Question 2:

Ex 2

2.

1. [1,2,3,4,?,10] → [1,2,3,4,5,10]

2. [1,2,3,4,5,10] → [1,2,3,4,5,10]

[1,2,3,4,5,?,10]

↓

~~[1,2,3,4,5,10]~~

[1,2,3,4,5,6,10]

Question 3:
Another technique to increase the size of the array is geometric growth. What it does is it doubles the capacity of the array each time it needs to grow.
